

Customer Churn Analysis: Subscription Service

An Excel Portfolio Project
Mohit Kumar
April 12, 2025

Project Overview

Objective: Analyze Customer Churn for a Subscription Service to identify at risk segments and recommended retention strategies.

Data Source: Customer Churn Training Dataset from Kaggle Consisting of 64,374 customer records demographics, subscription details, churn status that serves as a dataset for evaluating churn rate by parameters and recommend strategies.

Tools Used: Microsoft Excel (Pivot tables, Charts, Formulas, Slicers, Power Query editor, Power Pivot, Conditional Formatting)

Key Outputs: Customer Segmentation by risk category, KPI (Total Customers, Churn rate, Average Spend) and interactive Dashboard.

Why Analyze Customer Churn?

Problem Statement: Subscription Service lose revenue when Customer Churn (Cancel Subscription). Understanding who churns and why helps optimize retention.

Impact: Reducing churn by 5% can increase the profits by 25-95% (Industry Benchmark).

Questions Answered:

Which Customer Segments have the Highest Churn Rate?

How do Subscription types and Demographics influence Churn?

What Insights can drive retention Strategies?

How I Analyzed Data

Steps:

Data Cleaning: Evaluated Data Accuracy using filters and Power Query editor.

Segmentation: Grouped Customers by customer by subscription type, Customer type, risk category and gender using Pivot tables.

KPI Calculated:

Total customers : COUNT Formula.

Churn Rate: $\text{=Sum(Churn_yes)/ Total Customers}$

Average Spend = Average Formula

Visualization: Built Charts (bar, Pie, Line) and a Dashboard with Slicers.

Insights: Identified trend and recommendation .

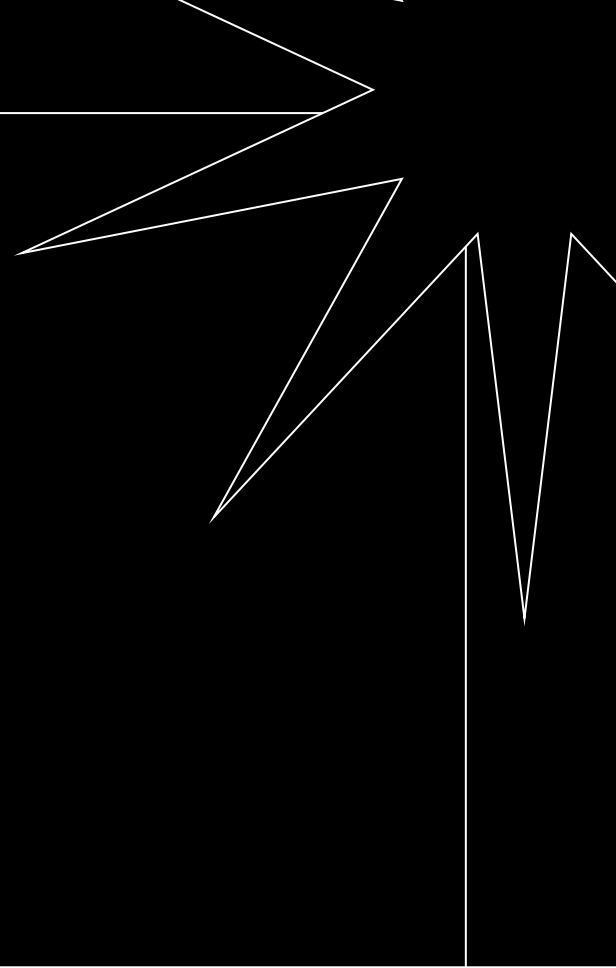

Measuring Churn: KPI

Total Customers: 440832

Churn Rate: 56.71%

Average Spend: Rs 632.32/month

Customer Segment Analysis

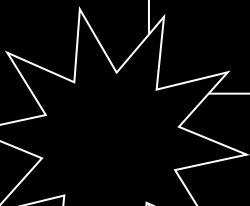

By Subscription Type:

- **Basic:** 25% churn rate, higher due to lower commitment
- **Standard:** 15% low due to more devices.
- **Premium:** 5% More Loyal

By Risk Category:

- **High Risk:** 46.88% urgent action needed.
- **Low Risk:** 53.12% needs improvement

By Gender:

- **Male:** 49.31% churn rate
 - **Female:** 66.71% churn rate
- 

Dashboard Showcase

Purpose: Consolidate KPIs and segmentation for easy decision making.

Features:

- **Slicers:** Filter by Subscription type and gender.
- **Charts:** Bar Chart for Subscription type, Average Spend, Gender, Pie Chart for risk Category, Customer type(churn or active).
- **KPI:** Total Customers, Overall Churn Rate, Average Spend Displayed Prominently.

Final Dashboard

Key Insights And Recommendations

Insights:

Basic Subscribers Churn rate at 25%, 10% higher than Standard type.
High Risk Customers(46.88%) only contribute to 15% of the revenue.

Recommendations:

Offer Discounts to Basic Subscribers to encourage Upgrades to premium.
Target High risk Customers with Personalized Retention campaigns(e.g.- Loyalty Rewards)
Improve Onboarding to New Customers to reduce early churn.
Monitor KPI Monthly using the dashboard to track Progress.

Conclusions and Skills Demonstrated

Project Summary: Analyzed Customer Churn to identify at-risk segment and built an interactive dashboard to guide retention strategies.

Business Impact: Insights can reduce by targeting high risk groups, Potentially saving in revenue.

Skills Demonstrated:

- Data Cleaning and Preparation.

- Advance Excel (Pivot tables, Charts, Slicers, Power Query, Power Pivot, Formulas)

- Segmentation and KPI analysis.

- Dashboard Design and Business Storytelling.
